11- ALTERNATIVE PRODUCTS: TWO FORMS OF THE PROTEIN, 33-A AND 33-B, &
11- PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE. THE SEQUENCE
SHOWN HERE IS THAT OF 33-B.
11- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. CONTAINS
ONE V-LIKE AND ONE C2-LIKE DOMAIN.
11- SIMILARITY: TO MYELIN-ASSOCIATED GLYCOPROTEIN AND SIALOADHESIN.

EX troponin is a heterotrimer with one molecule each of troponin
C (calcium binding component), troponin I (inhibitory
component), and troponin T (tropomyosin-binding component)
                                                                                                                                                                                                                                                                                                                                                                                                103 RIRAEKE 109
